```

Documentation is [available online](https://jv-conseil-internet-consulting.github.io/dkim-php-mail-signature/classes/JVconseil.DkimPhpMailSignature.DKIMconfig.html), though it may not be quite up to date or match your version exactly.

You can generate API documentation by running *phpdoc* in the top-level folder of this project, and documentation will be generated in this folder: `` php ~/vendor/bin/phpdoc -d ~/dkim-php-mail-signature/ -t ~/dkim-php-mail-signature/docs/ ``

You will need to have [phpDocumentor](https://www.phpdoc.org) installed.

Sponsorship

If this project helps you reduce time to develop, you can give me a cup of coffee :-)

```
